Common Vacuum Cleaner Problems

Before you search for a repair shop, it's helpful to know the common issues that require professional assistance:

1. Loss of Suction Power

The most frequent issue is reduced suction. This could be due to clogged filters, blocked hoses, or a worn-out motor.

2. Strange Noises

Unusual sounds indicate problems like broken belts, loose parts, or debris stuck inside.

3. Brush Roll Malfunction

If the brush roll is not spinning, it could be a sign of belt damage or motor failure.

4. Electrical Problems

Vacuum cleaners may fail to start due to wiring issues, blown fuses, or power switch failure.

5. Overheating

An overheating vacuum can shut down automatically. This is usually caused by a clogged airflow path or motor issues.
