

migSO and Clone Salesforce Objects

migSO's cloning feature enables you to [clone objects in salesforce](#) from one org to another including relevant fields, validation, record types, and field sets in a few clicks. Whether you're setting up a sandbox or cloning configurations across different orgs, migSO does it all!

Safe, Compliant, and Secure

migSO is a 100% native Salesforce app that only works on Salesforce metadata and does not account for your personal data. We prioritize data security and compliance, ensuring that objects are migrated according to best practices. With robust security features, you can ensure your data remains protected during the whole cloning process, providing peace of mind as you manage multiple orgs.

Maximize Productivity

Human errors are quite a common issue in manually cloning objects which creates inconsistencies. migSO helps you ensure the cloned objects are consistent across different orgs while eliminating guesswork and minimizing the chances of errors. If you want improved data accuracy, migSO is your go-to metadata management tool!

Save Your Time & Efforts

Time is critical and migSO empowers you to save time by eradicating repetitive tasks. By streamlining the cloning process, migSO allows your team to focus on strategic initiatives rather than mundane operational tasks. Automating such irksome tasks helps you efficiently manage your time!

User-Friendly Interface

[migSO](#) is a user-centric metadata management app which means you don't necessarily need to be a tech geek to utilize its functionalities. Its user-friendly interface makes it easy for admins and developers alike to manage and clone salesforce objects efficiently across multiple orgs.

Comprehensive Clone Reports

With migSO, you can quickly generate detailed reports regarding the cloning process, which include insights on what objects were cloned, any errors encountered, and a summary of relevant fields, validation, record types, and field sets.

How to Clone Objects in Salesforce By using migSO?

Using the [migSO](#), Clone Objects in Salesforce becomes a piece of cake. Simply follow the steps below and you'll be ready to work with your data.

Step 01 : Open migSO via App Launcher

Step 02 : Select Clone Wizard

Step 03 : Select Metadata Item

Step 04 : Select Source Org

Step 05 : Choose Objects & Deploy
Step 06 : Review Deployment Status
Step 07 : Set Fields Permission
Step 08 : Download Report

Why migSO

Salesforce runs on metadata. Yet the process of managing them is ineffective and tedious, leading to high cost, low efficiency, and increased risk. Meanwhile, your valuable time to manage these metadata in your Salesforce orgs remains trapped.

- Native Salesforce Solution
- Reliable & Secure
- Trusted Worldwide
- No Coding Required
